Integrated Clinical Database (ICDB) Interim Certificate to Operate

20010117

SUMMARY

- PURPOSE:** Obtain SC approval and signature on the USAFE interim certificate to operate for the Integrated Clinical Database (ICDB).
- BACKGROUND:** The Integrated Clinical Database is a site-hosted relational database populated with data from independent databases -- Ambulatory Data Sysem (ADS) and Composite Health Care System (CHCS I). HQ USAFE/SG requests approval to test ICDB at Aviano AB for evaluation prior to installing it at all USAFE medical treatment facilities (MTF).
- DISCUSSION:** ICDB is an application developed by TRICARE, Region VI in San Antonio, TX. ICDB does not have a fully completed C&A package. The ICDB server uses Windows NT 4.0 as the operating system, an Oracle 8i relational database, and Health Level 7 (HL7) as the interface between ADS and CHCS. Security evaluation and approval is based on the C&A minimum security checklist and system security architecture. ICDB documentation is available if requested. The certificate to operate is valid only after successful completion of an ISS scan by the 31st CS. This certificate to operate is only valid at Aviano AB, IT. The HQ USAFE/SCM position is to issue an interim certificate to operate and support fielding of ICDB.
- RECOMMENDATION:** SC sign ICDB interim certificate to operate and type accreditation memos at Tab 1 & 2.

JOHN M. DRZEMALA, Colonel, USAF
Chief, Mission Systems Division
